THE ORIGINAL

Spray paint for
repair & tuning

PRODUCT
CATALOGUE

Auto-K. The Original.

The classic product in the spray paint can

As the "paint shop in a can", the traditional Auto-K brand, has enjoyed a leading market position for many years.

As a pioneer in this segment, Peter Kwasny brought the idea and the required know-how in the fifties from the USA to Germany and experienced a trend-setting market entry in 1966 with the Auto-K Spray-Set, which influenced the future of the spray paint industry significantly. This success story still continues with the consistent further development of the technology, innovative product developments and the expansion of the Auto-K product range.

Today, the original Auto-K products offer the possibility for a fast, cost optimised and colour accurate paint repair, starting with the preparation products such as putty, sand paper and adhesive tape through original colours as spray paint or touch-up pencil up to many special and effect paints.

The catalogue includes additional assortments and premium brands by Kwasny such as the professional spray paint system SprayMax or the many approximate colours from the Multona colour world.

Variety around the subject automotive paint:

ORIGINAL

Original car colours in an easy to use Spray-Set or as a touch-up pencil

BASIC

High-class primers for the ideal preparation before application of the topcoat

UNIVERSAL

Universally applicable car spray paints in the most commonly used colours

SPECIAL

Special applications for the car, such as exhaust, engine, rims, plastics

EFFECT

Great effects in chrome or neon. For limitless colour tuning

TUNING

Liquid Gum – The peel-off sprayable film with a grip effect

Painting tips

1

2

3

Preparation

The surface to be painted should be thoroughly prepared before the spray can is used. Please pay attention to the respective directions for the different paint preparation products.

Work environment

Surfaces must be dry, dust- and fat-free. The ideal work temperature is between 20 °C and 25 °C. Avoid direct sunlight. Only paint outside or in well ventilated areas.

Shake can well

For the optimal distribution of the paint pigments, shake the can at least 2 minutes while it is clearly audible that the mixing balls hit the walls of the can.

Spray distance

Hold the can as vertical as possible and ensure a distance of approx. 25 cm, i.e. 3 handsizes. Spray on a metal test sheet first and check the colour result.

Spray process

Start with the spraying outside the painting surface and apply several thin layers evenly in a "cross coat". Cross coat describes the spraying of a horizontal and a subsequent vertical layer. Between the cross coats, wait for 2 to 3 minutes.

Cleaning the valve

After use, turn the can upside down and spray until valve is empty to prevent clogging.

Painting preparation

The good basis for a successful paint repair is a good preparation. Auto-K provides the most important products for all work processes. Please consider our suggestions - for a successful repair and a perfect painting result with Auto-K. Use Auto-K to remove scratches, stone-chipping damages, dents or corrosion.

Depending on the damage situation, please consider the following work steps:

- Cleaning
- Derusting
- Masking
- Filling
- Priming
- Sanding
- Painting
- Polishing

Cleaning

Please ensure a clean work surface and, if required, clean the surface between the work steps. The surface to be painted must be clean, dry, free of dust and grease.

Derusting

Clean the damaged area thoroughly and mask the surrounding parts carefully. The rust eraser qualifies for smaller areas. Our repair products help in case of larger damages and corrosion.

Rust eraser set

- Brass brush for perfect derusting
- Includes also the Auto-K protection clear lacquer to protect against rust until the damaged area can be repaired with the original colour

	Art. No.
Rust eraser set	746 003

Masking adhesive tape

- Masking adhesive tape with 19 mm width is suitable for mask roundings such as car wings or rims
- Masking adhesive tape in 30 mm is universally suitable for flat surfaces

	Art. No.
19 mm/50 m	746 037
30 mm/50 m	746 038

Polishing paste

- For the cleaning and polishing of severely contaminated metal surfaces
- Ideal for the removal of spray mist
- Applicable where conventional paint cleaners fail

	Art. No.
75 ml	745 130

Painting preparation

Repairing

The Auto-K repair products are optimally designed to meet the requirements of private small damage repairs. The different products support the removal and the bridging of perforation corosions, cracks, holes or cavities.

In addition to car bodies, Auto-K repair products can also be used for the repair of damages at caravans, boats, containers and similar items.

Glass fibre fabric

- Easily shapeable and attachable
- Ideal for the modelling of existing forms

	Art. No.
0.5 m ²	745 314

Glass fibre mat

- Especial dense and solid material with a high resistibility
- Can also be used for large area damages
- Outstanding for repairs at parts subject to vibrations (e.g. car wings)

	Art. No.
0.5 m ²	745 316

Glass fibre fleece

- Ideal for the coating of the outside of the metal sheet when repairing perforation corrosions, cracks, holes and cavities

	Art. No.
0.5 m ²	745 318

Polyester repair resin

- For the processing of glass fibre materials
- For small and large damages
- Can be used for cars, caravans, boats, surfboards, gutters or pipes

	Art. No.
250 g	745 450
1000 g	745 452

Polyester repair set

- Consisting of polyester repair resin, incl. hardener, glass fibre mat and plastics cover to mix resin and hardener.
- Universally applicable

	Art. No.
250 g	745 460
500 g	745 461
1000 g	745 462

Hardener

- Important when using repair resin and 2K putty, please mix using the listed ratio. This is the only way that the required dry through of repair resin and putty is possible.

	Art. No.
40 g	745 201

Painting preparation

Filling

Smaller irregularities on the surface to be painted can be easily equalised with Auto-K putty products. The following Auto-K products make it easy even for the inexperienced user to use the putty materials successfully. In addition to the proven Auto-K quality, the products stand out for their high level of user friendliness.

Included in all two component putty products are one hardener tube, one putty tool as well as a plastics cover, which can be used as a mixing cup.

Putty knife set

Combi putty

Fill putty

- The right knife size (4 blades of 5 cm to 12 cm) for each damage area
- Flexible knife sizes made of rust-proof metal or plastic

- Very well for smoothing small irregularities and to close pores in hardened polyester putty layers
- Easy applicability and good sandability

- To equalise and fill irregularities in the paint coat
- Can also be used as a filler over glass fibre putty
- Suitable for metal, rock, concrete, plastics, ceramics and wood

	Art. No.
Metal	746 040
Plastic	746 041

	Art. No.
100 g	745 100
200 g	745 507

Art. No.
250 g
1000 g
2000 g (without hardener)
745 400
745 402
745 403

Glass fibre putty

- Highly effective mixture of polyester resin and glass fibres
- High tear and break stability after hardening
- For metal cracks and point size perforation corosions

	Art. No.
250 g	745 410
500 g	745 411
1000 g	745 412

Elastic fill putty

- Mixed with aluminum powder
- Ideal for metal and plastic parts under vibration such as car wings or doors
- Can also be used for dry rock, plastic, ceramics or concrete

	Art. No.
250 g	745 420
500 g	745 421
1000 g	745 422

Universal putty

- For the smoothing of dents and recessions at metal, aluminium or plastic body parts (bumpers) or galvanised carbodies
- Universally applicable

	Art. No.
250 g	745 430
500 g	745 431
1000 g	745 432

Fine putty

- For smooth surfaces without pores made from plastics, metal or ceramics
- Adheres well on roughened, dry surfaces
- Can also be used as a filler over glass fibre putty

	Art. No.
250 g	745 440
500 g	745 441
1000 g	745 442

Painting preparation

Sanding

With the Auto-K sanding paper rust is removed, paint residues are sanded down and the dried through putty mass is sanded smooth. Residues of sanding dust can be removed with a soft cloth.

The large Auto-K sanding paper assortment offers the right grit for any need. The units include 5 sheets each.

Grits and use

Dry sanding	
P 40	For removal of thick rust and paint layers
P 60	For preparation of unfinished surfaces
P 80	For equalisation of strong irregularities
P 120	For sanding before priming or etching
P 180	For first sanding after priming

Wet sanding	
P 240	For first wet sanding after priming
P 400	For smooth sanding of primed surfaces
P 600	For fine sanding before painting
P 1000	For final fine sanding before painting
P 1200	For final fine sanding before painting
P 2000	For final fine sanding before painting

Sanding sponge

- For sanding of areas that can only be accessed with difficulties
- Can be used wet and dry
- Can be washed and reused
- Grit: P100

	Art. No.
Sanding sponge	746 043

Sanding block

- The rubber sanding block eases the work at flat and curved surfaces
- The arresting of the sanding paper prevents sliding and ripping

	Art. No.
Sanding block	746 036

Reliable primers

A good base

The Auto-K BASIC product line includes reliable primers as a perfect base for the subsequent topcoat. The wide-ranging spray paint assortment includes Anti-corrosion primers, fillers, spray fillers, plastics adhesion promoting agents and special primers such as zinc rich primer and zinc-alu-

sprays. The assortment is completed by a protective clear coat complementary to the BASIC products.

Before starting the work, please note our painting tips on page 4 as well as the application information on the can.

Anti-Corrosion primer

Auto-K Anti-corrosion primer is a highly active rust protection based on zinc phosphate, which protects metallic parts effectively. The chromate-free primer with corrosion protection pigments adheres well and enables a smooth painting. Ideally used as the first layer on the paint system. The product is outstandingly qualified for the use on blank, sanded metal sheets, sanded aluminium as well as hardened and sanded paintings.

Subsequent spot welding is possible. The corrosion protection remains intact.

red brown beige

9 ml	433 058
150 ml	033 058
400 ml	233 058
500 ml	633 058

Spray filler

Ideal for the filling or equalisation of irregularities or for the repair of scratches and scars without a large expenditure of time. The spray filler protects against corrosion, adheres well and provides a smooth substrate to guarantee an even coating.

grey

150 ml	033 032
400 ml	233 032

Filler primer

The product primes and fills in one work step, can be used universally and can be easily sanded. Pores and fine sanding grooves will be equalised due to the high solids content and a closed, smooth surface will be achieved. The subsequent sanding with fine sanding paper provides an even surface, which is required for a successful topcoat.

grey red

9 ml	433 001
150 ml	033 001
400 ml	233 001
500 ml	633 001

Plastics adhesion primer

The Auto-K Plastic adhesion primer improves the adhesion of the subsequent paint layer on plastic surfaces, e.g. spoilers, plastic exterior mirrors and bumpers.

400 ml 233 055

Aluminium primer

The Auto-K Aluminium primer is especially qualified for all aluminium substrates and provides an outstanding adhesion.

grey

400 ml 233 060

Zinc rich primer

The Auto-K Zinc rich primer is a highly effective, metallic rust protection primer on zinc basis. The high zinc content seals long-term and guarantees a high corrosion protection, even for temperatures above 400°C. The product is especially suitable for all car parts that must not be painted, e.g. exhaust systems, welding seams, galvanised parts and the inner side of the car body.

grey

150 ml 033 054

400 ml 233 054

Zinc-alu-spray

The Auto-K Zinc-alu-spray is especially suited as a corrosion protection for parts subjected to water and weather, for the repair work of damaged zinc surfaces and for the coating of internal metal sheet edges during spot welding. The product can be used for heating systems, pipelines, steel structures, radiators, hand rails, crash barriers, etc.

silver grey

400 ml 233 057

Rust converter spray

Rust converter and epoxy primer in one. For all vehicles. For hobby, trade and industrial applications. Simply spray the transparent constituent directly onto the rust. Remove loose rust first. The rust is turned into a black-grey protective coat that can be covered with a 1K topcoat when dry. Effective rust repairs for all metal plates, ferrous metals and steel – and all in a simple spray can.

transparent

400 ml 233 063

Protection clear lacquer

The Auto-K Protection clear lacquer is a high-grade, transparent special combination paint, which offers gloss and surface sealing. Almost all sheet metal, metal and plastics objects can be successfully protected against corrosion, stone chips and dirt. Available with glossy and satin gloss effects.

Standard and Fast moving colours

For a variety of applications

The Auto-K UNIVERSAL product line includes fast drying special combinations paints in standard colours. This can beautify sheet metal, metal and plastics objects without a significant expenditure of time. Auto-K car paint sprays are universally applicable and are available in the most common

colours of the automotive sector. They stand out for their good leveling properties and their high yield.

Before starting the work, please note our painting tips on page 4 as well as the application information on the can.

Auto-K Spray paint for cars

The ideal product for a fast, cost optimised and colour matching paint repair with the spray paint can.

Auto-K Spray paint for cars is available in the most common and fast moving colours, such as black matt or white gloss.

The fast drying product convinces through its easy handling and its universal usability with respect to the substrates (metal, steel metal sheet, plastics, etc.) as well as the application variety.

Also qualified for non-automotive applications such as decorative paintings.

Clean solutions

For the very special cases

Auto-K SPECIAL is the spray paint program for very special applications such as heat resistant spray paints, products for the plastics, rims, aluminium, brake calliper areas as well as transparent special products in form of sprays and associated removers.

Before starting the work, please note our painting tips on page 4 as well as the application information on the can.

Heat-resistant paint 300°C

The heat-resistant special paint for a temperature range of 80 to 300°C. This can beautify parts that are significantly more challenged by temperatures, i.e. in the engine area, parts of the exhaust system or at the air cooler, etc. The paint only hardens by slowly heating the painted object.

black red Clearcoat

150 ml	033 051		
400 ml	233 051	233 047	233 048

Heat-resistant paint 650°C

The heat resistant special coating is qualified for parts that are especially challenged by temperature. Applicable in the engine area, the exhaust system, at two wheelers, grills, stove pipes and everywhere where temperatures of up to 650°C are experienced. The paint only hardens by slowly heating above 250°C.

Fascinating effects

The eye-catching colour joy

Auto-K EFFECT, the product line for around the car - easily available in a spray paint can. Also especially suitable for decorative objects made from metal, sheet metal or plastics. The Auto-K EFFECT assortment includes effect sprays and colours in neon, chrome, gold, copper and brilliant metallic.

Before starting the work, please note our painting tips on page 4 as well as the application information on the can.

Neon spray paint

Auto-K Neon spray paint is a fluorescent and fast drying paint. It can paint sheet metal, metal and plastic objects in a flashy way. The Auto-K Neon spray paint has a warning and signal effect due to its fluorescent pigments. The prerequisite for a good illuminating power is a surface uniformly primed with white matt. Re-coating with clearcoat achieves weather resistance and gloss (see page 17).

In accordance with StVZO it is not permissible at visible outside vehicle parts.

Liquid Gum sprayable film

The peel-off sprayable film with a grip effect*

The Auto-K assortment represents innovation and quality with respect to tuning and design. This fits our new Liquid Gum product ideally. Liquid Gum sets completely new standards in the area of flexible tuning. Liquid Gum provides protection for paint and rim. In addition also for many other application areas.

Liquid Gum in use:

- Protection, decoration and design
- Ideal for wheel rims and car bodies
- Proof against stone chip damages and adhesion
- For house, handcraft and hobby
- For indoor and outdoor use
- Highly tear resistant when peeling off
- Recoatable with topcoats

NEW!

* Grip effect: Non-slip function

Washing your car?
No problem. Liquid Gum
withstands and can still
be peeled off at any time.

Ideal for cars, commercial vehicles or two-wheelers

Whether in colour or as colourless transparent surface protection out of the spray can, Auto-K Liquid Gum is equally good when visible or invisible.

Protect sensitive painted or plastic parts against dirt, mechanical loads, damage, or weathering. Great colours, strong adhesion, reliable protection.

Great colours, strong adhesion properties – and the great thing is that the reliable protective film can be removed again easily and completely at any time without causing scratches.

Application video

Our Auto-K Liquid Gum application video with valuable suggestions, tips and tricks helps you to ensure that the application is successful. For further information visit

Versatile, also for home and garden applications

The Liquid Gum's colour and protective film is also ideal for refreshing or repairing everyday objects, lending them a completely new look.

And as soon as your colour scheme changes, the film can simply be peeled off allowing you to redesign the object. Liquid Gum allows you the freedom to put your design ideas into practice, be it to match the season or for a specific event.

Absolute freedom in terms of colour designs

Liquid Gum allows you to change the colour design as often as you want. Trendy and eye-catching colours and neon tones are available, as are neutral black or white.

Applying topcoats

The user profits from design and colour freedom thanks to the fact that conventional 1K/2K top coats and Auto-K and belton spray paints can be applied on top. This also improves the weather resistance and protects the paint.

Liquid Gum

The Liquid Gum Spray helps you to create a high-quality coating for protection, decorative or design purposes on your car or a wide range of other objects: and the clever thing is, the spray creates a paint-like protective film that can be peeled off easily at any time. New exciting design possibilities whenever you want.

Guaranteed Auto-K quality

- Simple application
- Outstanding adhesion
- Abrasion and stone chip resistant
- Non-slip surface (grip)
- For indoor and outdoor use
- Highly tear resistant when peeling off
- Recoatable with topcoats

Please note!

The surface always needs to be white or primed with white first before applying neon colours (green, orange, pink) and brilliant blue. This ensures that the colours develop their brightness!

We recommend applying 2 coats of Auto-K Liquid Gum white (Art. No.: 233 251). Then apply the colour shade of your choice.

The number of spray coats has an impact on the colour intensity; The more spray coats there are, the more intensive the colour result. Minimum 5 spray passes are required to achieve full hiding as well as the full tearing strength required for the peel-off procedure.

The neon colours (green, orange and pink) may change, if exposed to direct sunlight.

The spray film can be removed and painted over after a drying period of about 2 hours.

Applying top coats: Liquid Gum spray film can be painted over with max. 3 layers of all conventional 1K/2K top coats, Auto-K and belton spray paints. Additional top coat layers make it more difficult to peel off the film.

Auto-K original colours

The classic product for the paint repair

ORIGINAL colours for your vehicle! Auto-K Spray-Sets as well as Auto-K touch-up pencils represent a simple, fast and cost effective car paint repair in the respective original factory colours (e.g. LY3D VW tornado red).

Auto-K ORIGINAL paints provide weather and light resistance and have a high colour accuracy. The paint results are comparable with refinishing done by using a paint gun.

Before starting the work, please note our painting tips on page 4 as well as the application information on the can.

If you cannot find the requested colour in the Auto-K assortment, then there is certainly an optimal alternative in one of the other brands of Kwasny.

The original colour code for your car can be found on the colour code label. Depending on the manufacturer and the car model, it can be found at different parts of the carbody.

Detailed information on this subject can be found in our Colour program automotive (Art. No.: 990 710) on pages 3 and 4.

Auto-K Spray-Set

The paint shop in a can format

The success story of Peter Kwasny GmbH started with the Auto-K Spray-Set. Today, almost unchanged, the set with the practical closing cap includes 150 ml automotive paint in the original colour to spray or to speckle with the attached brush. Ideal for small or medium damages.

Please note: Some Auto-K Spray-Set colours must be re-coated with Auto-K Basic 2-coat clear lacquer (see page 17). The clearcoat for the 2-coat paints provides gloss and weather resistance.

approx. **650** Original manufacturer's colours are available.

Auto-K touch-up pencils

The fast helper: Simply "speckle"

Auto-K touch-up pencils are ideal for the simple and fast repair of smallest paint damages, for example caused by stone chips and splits. The Auto-K touch-up pencil contains 9 ml of car paint in the original colour. The Auto-K

touch-up pencil is available as a 1-coat or 2-coat paint. The 2-coat paint is offered together with the required clearcoat. The clearcoat for the 2-coat paints provides gloss and weather resistance.

approx. **300** Original manufacturer's colours are available.

This is where you find the right colour

Colour program automotive

The new Auto colour tone program (Art. No.: 990 710) now also includes the colours you require as spray paints or touch-up sticks, either in original colours or approximate colours. The information is arranged clearly according to vehicle make (e.g. Volkswagen/Audi etc.), colour code (e.g. LY3D) and colour name (e.g. Tornadorot). Also sorted according to original automobile colours are the Auto-K Spray-Set, Auto-K touch-up sticks, SprayMax for commercial users and approximate colours in the Multona program. In addition, there is a precise description of how and where to find the colour code on the vehicle.

This enables you to find the colour tone you require easily, quickly and precisely.

Digital searching made easy

Colour finder for all Kwasny product lines

To find the right colour, we recommend our colour finder tool, which we make available to you online or as a web app for mobile applications. This is where you find the right product recommendation fast and uncomplicated for your brand and your required colour.

Our Online colour search helps you
for the selection of the suitable product.

Practical accessories

Kwasny spray hand grip

Art. No.: 746 200 bulk

Art. No.: 746 202 blistered

Spray can handle for the simple and familiar handling during painting with Auto-K or other spray paint products.

Benefits:

- Easy handling that makes work simpler
- Increased painting safety
- No influencing or disturbing of the spray jet
- Handling is the same as with a paint gun

Kwasny Nozzle set

Art. No.: 746 203

Nozzle Set with a variety of nozzles for flexible use for Auto-K spray paint cans or other Kwasny spray paints.

Benefits:

- 4 different nozzles for small, medium and large surfaces
- For an increased paint safety
- The spray jet is adapted to the respective painting object or the painting requirements
- The nozzles can be re-used several times
- Contains a total of 6 nozzles

More brands – more options

Get to know more Kwasny brands. We recommend our SprayMax System, which is also suitable for the repair of larger damages at the car, for experienced users with professional paint repair know-how. However, an approximation colour from the Multona spectrum may be well suited for

older cars or commercial vehicles as well as construction, garden and agricultural machines. And for the entire family and many applications in house and garden, we are pleased to refer to the belton paint sprays for the creative, repair and decorative use.

Paint systems for professional paint repairs

SprayMax is an aerosol coating system filled with original paints for the professional small repair. The unique SprayMax aerosol technology achieves paint results that were so far only possible when using a paint gun. Flexible, precise, cost effective

www.spraymax.com

Car spray paint close to the original colour

An approximation colour is not an original colour but it is equivalent to a certain car factory colour within narrowly defined tolerances. The Multona colour system includes a finely tuned, logically designed colour spectrum and is suitable for the easy, fast and cost effective paint repair.

- Wide colour spectrum with current colour trends in the car industry
- Ideal for truck and commercial vehicles as well as construction and agricultural machines
- Available in a variety of RAL colours and special Kwasny colours
- Ideal from small to medium paint repairs
- Also suitable for the creative and decoration area

All Multona paint sprays are 1-coat paints, which means that an overcoat with clear lacquer is not required. However, we recommend the use of Multona 2-coat clear lacquer to improve the gloss and weather resistance.

For decorative and creative spray painting

belton establishes quality standards for technologically sophisticated spray painting for the house, hobby and decoration segment. All requirements are fulfilled with maximum user friendliness, best painting results and innovative products.

The belton product family includes:

- Primers and cleaning sprays
- Paints for special applications
- RAL spray paints
- Acrylic water-based paints
- Colour paints in synthetic resin quality
- as well as flip-flop effect paints
